ENROLLING AN APPLICATION	1
--------------------------------	---

1. Log in to Saviynt Identity Cloud.
2. Navigate to **Design > Manage Applications**. Alternatively, enter **Manage Applications** in the search box and select the required menu item. For more information, see [Using the Unified Navigation](#).

The **Enroll and manage applications** page is displayed. To familiarize yourself with this page, see [Understanding the Interface](#).

3. Click the **Add Applications** tab.
4. Open the Enroll New <Application Type> wizard in one of the following ways:
 - In the tile view, click **Create** in the tile for the application type.
 - In the list view, click **Create** to the right of the application type. Alternatively, click **More** to view the additional information about the application type, and click **Create**.
 - Click the **Catalog** tab. Click **View Details** to the right of an application type. On the Instances page that displays, click **Create New <Application Type> Instances**.
5. Provide the following details for the application, and click **Next**.
 - **Name:** Specify a unique name for the application. If the specified name is not unique, you are prompted to enter a different name.
 - **Description:** Specify a description for the application.

- **Application Owner:** Select **I am the owner** if you want to mark yourself as the owner of the application. Otherwise, select a different owner for the application.
 - Specify whether the Owner Type of the application is a user or a user group.
 - Select a user or a user group as the owner of the application depending on the selected Owner Type.
6. In the Select Features page, select the features that you want to use for the application that you are enrolling. By default, the Basic configuration feature is selected. If you do not select a feature, you can select it after enrolling the application. When finished, click **Next**.
 7. In the Connection page, provide values to the connection settings required to establish a connection with the target application, and click **Next**. For information about the connection settings, see the respective integration guide for the target application type.
 8. In the summary page that displays the basic and features selection for the application, click **Complete Enrollment** to enroll the application. A message is displayed stating that the application has been successfully onboarded.

This action performs quick enrollment by using the default settings and the few details you provided. The enrolled application is displayed in the **Catalog** tab of the Application Management page. You can use this page for making additional changes to the specified settings if required.
